

### Survey at Beca

Our clients do incredible things every day. They are transforming communities and changing lives, and we are right there alongside them.

Our innovative survey team works together to transform the spaces where we live, work and play. We provide surveying services for large infrastructure, construction, land development, geodetic, 3D modelling, hydrographic, topographic and cadastral projects across the country and overseas.

Our national survey team has 70 Surveyors, including licensed cadastral surveyors, many international ex-pats and a strong annual graduate intake. This mix of experience makes Beca a diverse, rewarding and dynamic place to develop your career.

### The opportunity

Our growth in the central region means we are looking for a [Surveyor](#) or [Survey Technician](#) to join our team in [Wellington](#). This opportunity will see you taking responsibility for the delivery of survey projects and working autonomously or as part of a team to ensure the delivery of quality projects within time and budget.

Our projects include some of the most significant legislation and Land Development projects in the central region and nationally and across the Pacific region. Our varied workload means you are given the opportunity to specialise or diversify your skills across any area of survey, be it topographic, cadastral or set-out using all the latest tools and techniques including 3D scanning, UAV and modelling of point cloud data.

### About you

Whether you are just starting out or you have 10 years of experience, we may have a role to suit you. We are looking for people who have a strong sense of ownership and a record of delivering on time, while also being open to developing your client-facing skills.

With a desire to grow your skills and develop yourself professionally, as well as sharing your knowledge whilst learning from those around you. Ideally, you will start with a good level of competency in GNSS, robotic total stations, LandOnline and survey software, proficiency in 12d would be preferred but not essential.

More importantly, we are looking for someone who embraces challenges, loves to learn and leads with a mindset of continual improvement. You will be a value-driven person who enjoys sharing the successes of your colleagues and delivering excellence for your clients.

You will have a desire to grow your skills and develop yourself professionally, as well as assisting with mentoring and developing junior staff.

### What we offer

A career with Beca will provide you with:

- Access to a modern fleet of equipment including Scanners, UAVs, GNSS and TPS supported by an extensive suite of software tools beyond the standard.
- A supportive and caring work environment where you can bring your whole self to work.
- Flexible working arrangements to balance your personal / family commitments.
- Opportunities to learn from our industry experts and technical gurus either on the project or by getting stuck in with our national technical development group, drawing on our best ideas to keep Beca at the forefront of survey technology.
- A highly supportive environment of sharing and collaboration.

### Ready to make the move?
