

## **Application Specialist/Surveyor**

### **About Trimble**

Trimble Access is the world's leading data collection software for land surveyors and civil engineers. Our customers build roads, railways, tunnels, bridges and buildings. They subdivide land and locate underground utilities. As part of our Christchurch-based development team, you will be involved in the development of an application that spans Bluetooth communications, geodetics, geometry, 3D visualisation and cloud connectivity.

### **About the role**

The Applications Specialist/Surveyor will be involved in the specification, testing, documentation and preparation for release of Trimble Geospatial projects for the land surveyor or Mapping and GIS professional.

You will be required to carry out component testing of field data collection software as well as field systems testing of software, conventional systems, GNSS receivers, and office and cloud-based software. In addition, there will be the specification of new software features and the creation of user documentation of these features.

The Application Specialist/Surveyor will be assigned segments of functionality from a project and will be responsible for:

- Interpretation of high-level marketing requirements into detailed user-centric specifications suitable for development purposes
- Day to day liaison with development staff
- Component and system testing of products during development
- Provision of end user documentation and on-line help
- Input and assistance on released product issues
- Input into marketing materials as required by the product management group.

### **About you**

Our ideal candidate will work well in a team-based environment as well as being self-motivated to succeed. You will accept a high level of personal responsibility for project success in an environment of shared resources.

### **You will demonstrate the following skills:**

- Sound communication skills, verbal and written
- Strong commitment to quality
- Persistence and inquisitiveness
- Great problem-solving skills
- A high level of energy and enthusiasm

### **Skills & Experience**

- BSc degree or equivalent qualification in one of the Geospatial disciplines (Land Survey, Geodesy, or Geomatics).

### **Apply**

- To apply for this role, please submit a Covering Letter and an up-to-date CV.
- Don't delay in applying as we will be reviewing and progressing suitable candidates upon receipt of their application.

**Note: Only applicants who are legally entitled to work in New Zealand will be considered.**

**Trimble is proud to be an Equal Opportunity and considers qualified applicants for employment without regard to race, gender, age, colour, religion, national origin, marital status, disability, sexual orientation, or any other protected factor.**
